

Display apparatus with a cathode ray tube, degaussing circuit for such a display apparatus and processing for degaussing a cathode ray tube

Abstract

A display apparatus with a cathode ray tube has a degaussing circuit fed by a voltage. The degaussing circuit includes at least a PTC resistor and at least a degaussing coil. Further circuit elements are provided for selecting an impedance of the degaussing circuit based on said voltage. A process Degaussing the cathode ray tube is also described occurs according to a specific process.
